技术规格

Background:	This gene encodes a member of the serine proteinase inhibitor or (serpin) superfamily. This member is the principal inhibitor of tissue plasminogen activator (tPA) and urokinase (uPA), and hence is an inhibitor of fibrinolysis. Defects in this gene are the cause of plasminogen activator inhibitor-1 deficiency (PAI-1 deficiency), and high concentrations of the gene product are associated with thrombophilia. Alternatively spliced transcript variants encoding different isoforms have been found for this gene.
Applications:	ELISA, WB
Name of antibody:	SERPINE1
Immunogen:	Fusion protein of human SERPINE1
Full name:	serpin family E member 1

Synonyms:	PAI; PAI1; PAI-1; PLANH1
SwissProt:	P05121
WB Predicted band size:	45 kDa
WB Positive control:	BGC823 whole cell lysate
WB Recommended dilution :	200-1000
