### 技术规格

<b>Background:</b>	Signaling adapter molecule involved in p75NTR/NGFR signaling. Plays a role in cell cycle progression and neuronal differentiation. Inhibits neuronal differentiation in response to nerve growth factor (NGF). May act as a link between the cell cycle and neurotrophic factor signaling , possibly by functioning as an upstream modulator of receptor signaling, coordinating biological responses to external signals with internal cellular states (By similarity ).
<b>Applications:</b>	ELISA, IHC
<b>Name of antibody:</b>	BEX1
<b>Immunogen:</b>	Full length fusion protein

<b>Full name:</b>	brain expressed X-linked 1
